FAQ

You really want to learn about the history of Lockheed Martin and the design and development of this airplane. This jet aircraft has the power, speed, and performance to dominate the sky. Because of its superior maneuverability, high-speed, and heavy armament, the F-117 was the only true "stealth" fighter aircraft of its time. With its sophisticated radar-evading technologies, the F-117 could enter any airspace in the world undetected. The F-117 was the most advanced fighter aircraft of its time, but the technology was one of the most sophisticated of its kind. The aircraft was designed and engineered by Lockheed Martin and built in the United States. It has operated in the US Air Force, the US Navy and in the US Intelligence community. * General Description * The F-117 is a very sleek, twin-engine, all-weather, supersonic, variable-sweep wing tactical fighter aircraft, equipped with internal and external weapons bays. The F-117 is designed to be stealthy in combat. The F-117A is manufactured by Lockheed Martin, based on their earlier work on the F-22. As such, Lockheed Martin have taken great care to ensure the F-117 is indistinguishable from an F-22 in terms of aerodynamics and operational capability. The design of the F-117 was carried out by Lockheed Martin, and the initial prototype was completed and flown on July 2, 1981. The first flight was made by the pilot, Maj. Barry Schwartsman. The F-117A was subsequently developed by Lockheed for the United States Air Force. It was originally known as the "Flanker-E" (later the "Blinder"). Development was delayed by international competition from the French Dassault Rafale and the Sukhoi Su-27. The first flight of the F-117A prototype was on May 20, 1985, and the first flight of the F-117A by the US Air Force was on November 12, 1988, the first flight with the full suite of an operational operational capability. The F-117A completed its initial flight tests in 1990, and began entering service in the U.S. Air Force in 1991. The U.S. Air Force's F-117s are known as "Stealth fighters", because of their ability to fly undetected in the airspace of their potential enemies. The F-117A, like its predecessor the F-22, also utilizes a swept wing design, providing high maneuverability at slow speeds 82157476af
