Q: Use vstack function to stack multiple matrices I have a list of matrices that I need to stack on top of each other using a function that I am writing. I am using the vstack function from the Matlab File Exchange, and it works great. It makes stacking arrays very easy. However, my problem is that the arrays are not the same dimensions. The first matrix is 3 x 4, the second 3 x 4 x 3, and the third 3 x 3 x 4. So they all need to be stacked in the same way (transposed and then reshaped into a 3 x 4 array). I tried using reshape, but I get an error that the size of the resulting array is not equal to the number of arrays to be stacked. I also tried turning the first matrix into a 1 x n x n array, but then I run into other issues. I am wondering if there is another way to stack the first matrix with the other two with the vstack function? Here is my code for an example

```
x = vstack(reshape(single(single(single(rand(3,4)),1)),[],1)',reshape(single(single(single(rand(3,4,3)),1),[],1)',reshape(single(single(single(rand(3,3,4)),1),[],1)'),reshape(single(single(single(rand(3,3,3,3),1),[],1)',reshape(single(single(single(single(rand(3,3,3,3),1),[], 82157476af
```
